

How secure is your application?

Trusted

By some of the largest companies in the world to secure their web sites, mobile apps, and other applications for over 10 years

Thorough

A single automated test nor manual review is enough - we combine multiple automated and manual tests with our proprietary technology to identify the highest risk vulnerabilities quickly

Actionable

Not just an assessment report, we provide vulnerability data in ThreadFix to accelerate fixes by over 40% (free license included) and developer guidance

Immediate

We let you know as soon as we find high risk vulnerabilities so that you can begin fixing them right away

Assessments

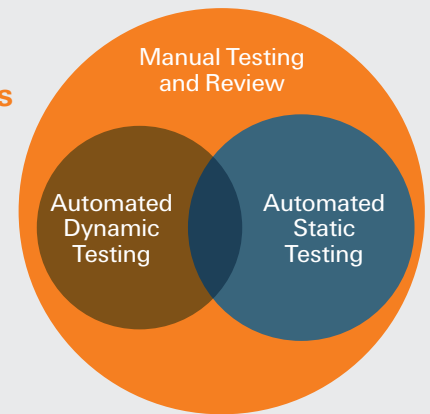

Starting at \$7,500, know your security risk:

- Where you're vulnerable to attack
- How to fix it quickly
- Track progress as it is fixed

Potential Security Defects

We go beyond the limitations of automated security testing tools.

A single Dynamic or Static scanner may find only 14% of an application's vulnerabilities.

Assessment Comparison Table

	Quick Check	Targeted	Full
Cost	\$7,500	Sized to budget	Custom quote
Depth	●○○	●●○	●●●
Fit	Great for rapid releases or less critical applications	More critical applications but time or budget is limited	Full assessment of most critical applications
Results in	Within a few days	2-3 weeks	Customized
Report	Summary of findings, risk and recommendations for further testing as needed	Detailed findings, risk ranking, vulnerability breakdown, and recommendations	Detailed findings, risk ranking, vulnerability breakdown, and recommendations
Fix guidance		Optional	Yes
Post remediation retest		Optional	Yes
Findings in ThreadFix	Optional	Yes	Yes
