

## Efficiently Identify & Remediate Application Vulnerabilities\*

\* ThreadFix customers report over 40% reduction in time to fix software vulnerabilities.

### Consolidated Scan Results

- Integrate with over 30 security scanning tools
- Automatically merge results using patent pending Hybrid Analysis Mapping (HAM) technology
- Free up time for higher value security analysis

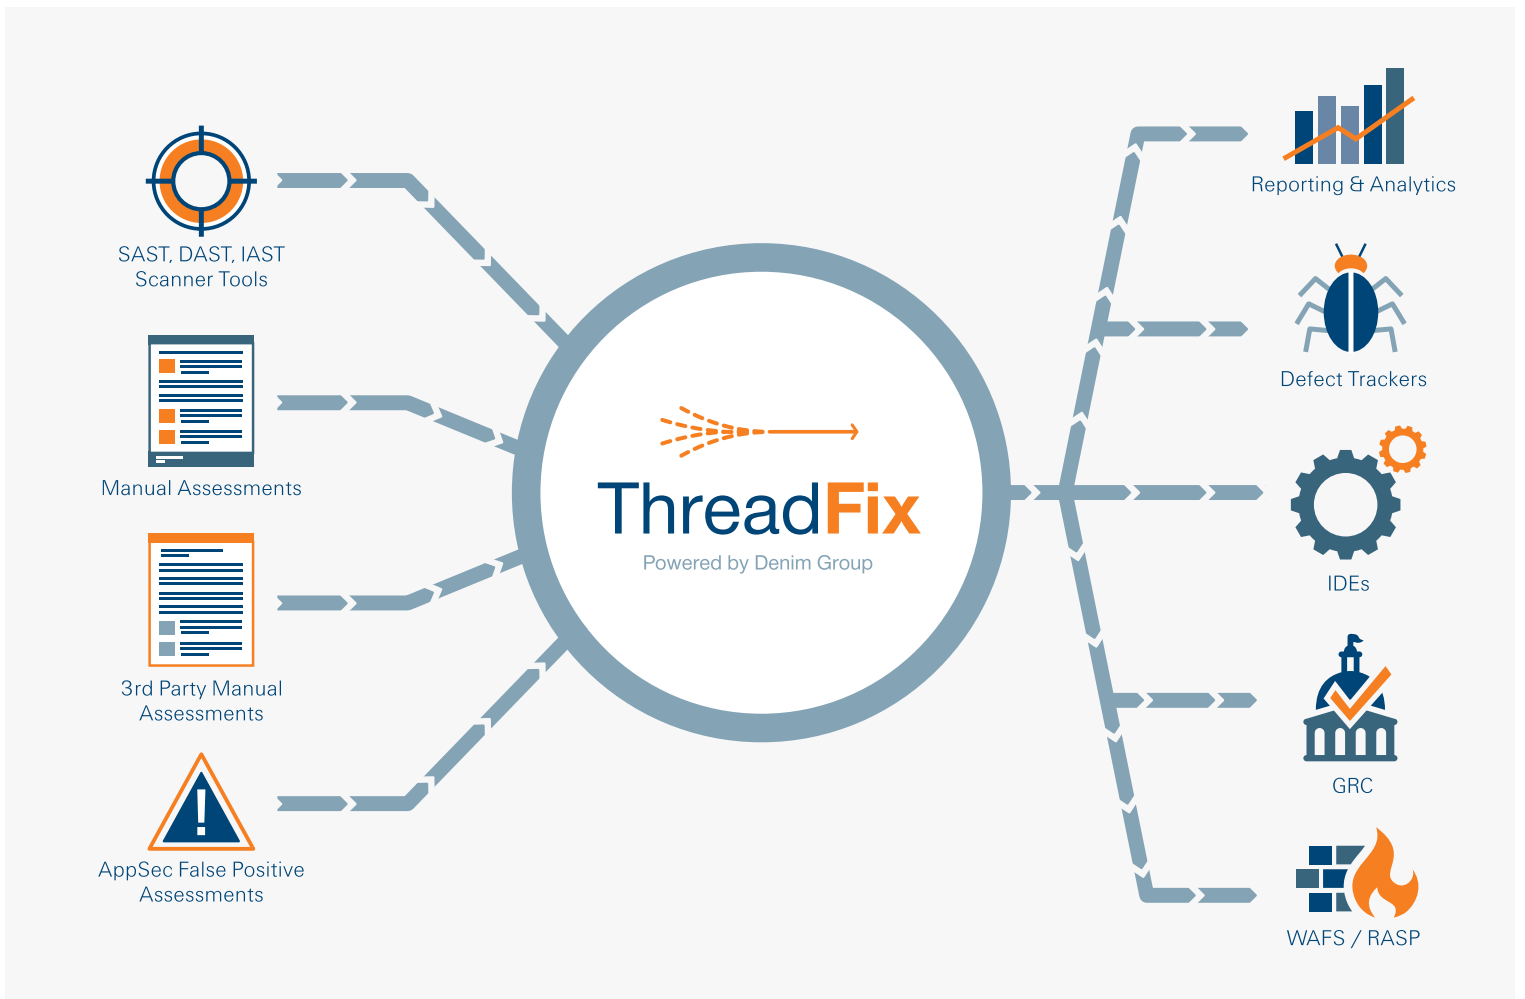

### Faster Vulnerability Remediation

- Prioritize and send vulnerability data to defect tracking and change management tools
- Track vulnerabilities to remediation as developers fix defects
- Integrate fast-paced agile development teams using a continuous vulnerability resolution workflow

### Powerful Reporting & Analytics

- Measure, report and make smart remediation decisions based on data in a centralized dashboard
- Identify and lower mean-time-to-remediate across your application portfolio
- Easily provide management reports and support ad hoc analysis

## Integrations

ThreadFix integrates with over 40 scanning, GRC, and defect tracking tools.

### Scanning Tools

- Checkmarx CxSAST
- HPE Fortify SCA
- HPE WebInspect Enterprise
- IBM AppScan
- Qualys Web Application Scanning
- Rapid7 AppSpider
- Tenable Nessus
- Veracode Dynamic & Static Analysis
- WhiteHat Security Sentinel
- ...and more

### IDE, GRC & Defect Trackers

- Atlassian JIRA
- Eclipse IDE
- HP Quality Center
- Microsoft TFS
- ...and more

*ThreadFix has provided us a platform in which we can integrate disparate and incompatible tools that now work in harmony in our Secure Development Lifecycle.*
